

Deepfake Detection with Human-in-the-Loop — Forensic Report

UNTRAINED MODEL: results not indicative of real accuracy

I. Case Information

Case ID	CASE-0002
Date Submitted	2026-09-29T17:20:17+00:00
Submitted By (Investigator)	Demo Investigator (INV-01)
Reviewed By (Analyst)	Demo Analyst (ANA-01)

II. Submitted Images (redacted: blurred face crops only)

Suspect image  SHA-256: 126f675adfa9fc9d3906df2b2747cd4add67c99ddb82d2756f4f5d1 bdd53c640	Reference image  SHA-256: 2418889d0d83962d51facc3832b55cf1849690018a1e873d1c55114 6555cd02f
---	--

III. AI Analysis

AUTOMATED — AI-assisted preliminary analysis (not a verdict)

Preliminary classification	Real
Confidence score	0.5877
Cosine similarity	0.9889
Euclidean similarity	0.8945
SSIM (aligned face crops)	0.5848
Aggregated score S	0.8227
Threshold tau	0.7000
Decision rule	Real if $S \geq \tau$, otherwise Deepfake
Model version	hybrid-efb4-vits16-v1.0-untrained-random-init
Model status	UNTRAINED (ImageNet / random init)

The automated analysis is a preliminary, AI-assisted indication only. It is not a verdict. The analyst's human-verified conclusion in Section IV is the finding of this report.

IV. Human Review

HUMAN-VERIFIED — Forensic analyst conclusion

Review decision	Override
Final classification	Deepfake
Rationale	Warping around the eyes and nose bridge and an unnatural colour shift confined to the inner face region; inconsistent with the reference.
